FUEL CELL STACK AND FUEL CELL MODULE

Examiner: Yuan S.N. 10/064,886 Art Unit: 1745 September 28, 2004

Detailed Action

1. The Applicant's amendment filed on July 21, 2004 was received. Claims 12,18,19,24 were amended. Claims 32-34 were added.
2. The text of those sections of Title 35, U.S.C. code not included in this action can be found in the prior Office Action issued on June 4, 2004.

Claim Rejections

3. The claim rejections under 35 U.S.C. 102(e) as anticipated by Hsu on claims 12-17,20-23 are withdrawn because the independent claim 12 has been amended.

Reasons for Allowance

4. Claims 12-34 are allowed. The invention of independent claim 12 recites a fuel cell module comprising a vessel having an inlet and an outlet, at least three fuel cell stack arranged in a ring within the vessel, said fuel cell stacks separating an inner and an outer volume of the vessel, said inner and outer volumes being in fluid communication through said fuel cell stack, a plurality of electrical connections between the fuel cell stack, and a plurality of corner stack seals, each the corner stack seals being disposed along at least one of (a) an edge joining two of said fuel cell stacks and (b) a face joining two said fuel cell stacks, wherein each of the corner

stack seals comprises a leaky seal. The closest prior art of record, Hsu, does not teach or suggest the addition of a plurality of corner stack seals in a fuel cell module as stated in the claim.

The invention of independent claim 24 recites a fuel cell module comprising a vessel having an inlet and an outlet, at least three fuel cell stack arranged in a ring within the vessel, said fuel cell stacks separating an inner and an outer volume of the vessel, said inner and outer volumes being in fluid communication through said fuel cell stack, a plurality of electrical connections between the fuel cell stack, and at least one heat exchanger connecting a pair of said fuel cell stacks and configured to supply the fuel flow exhausted from one of said pair of fuel cell stacks to a second of said pair of fuel cell stacks. The closest prior art of record, Hsu, does not teach or suggest the use of at least one heat exchanger connecting a pair of said fuel cell stacks and configured to supply the fuel flow exhausted from one of said pair of fuel cell stacks to a second of said pair of fuel cell stacks in a fuel cell module.
